## GENERAL INFORMATION

### 1. Purpose and Scope

This Federal Item Identification Guide (FIIG) is a self-contained document for the collection, coding, transmittal, and retrieval of item characteristics and related supply management data for an item of supply for logistical use. This FIIG is to be used to describe items of supply identified by the index of approved item names appearing in this section.

### 2. Contents

This FIIG is comprised of the following:

- Index of Approved Item Names Covered by this FIIG
- Applicability Key Index
- Section I - Item Characteristics Data Requirements
- Section III - New text that should be here.
- Appendix A - Reply Tables
- Appendix B - Reference Drawing Groups (as applicable)
- Appendix C - Technical Data Tables (as applicable)

#### a. Index of Approved Item Names Covered by this FIIG:

The index lists the approved item names with definitions and item name codes as they appear in Cataloging Handbook H6, applicable to this FIIG. In addition, each name entry is assigned an applicability key for use in relating the characteristics requirements in Section I to the specific item name.

#### b. Applicability Key Index:

The purpose of this index is to provide the user with a ready reference for determining the specific requirements which are applicable to a given approved item name. This index lists all requirements in sequence as they appear in the FIIG. The applicability of a Master Requirement Coded requirement is indicated by the column headed by the specific item name applicability key as follows:

(1) The letter "X" indicates the requirement must be answered for a full descriptive item.

(2) The letters "AR" indicate the requirement is to be answered as required by (1) instructional notes within the FIIG; (2) when the reply is predicated on replies to a related main requirement; or (3) when an asterisk (\*) is used in conjunction with the applicability key column in Section I.

(3) A blank in the column indicates the requirement is not applicable to the specific item name.

## GENERAL INFORMATION

### c. Section I - Item Characteristics Data Requirements:

This section contains the physical and performance characteristics requirements needed to describe and identify an item of supply. These characteristics differentiate one item from all other items of supply and are to be used to meet the needs of all supported functions. This section is arranged in columns. Identification of each column and instructions pertinent thereto are as follows:

#### (1) Applicability Key:

The first column shows the applicability key(s) for each requirement. It indicates whether the requirement need be satisfied for the item being identified. "ALL" indicates that the requirement must be answered for all items covered by the FIIG. One or more alphabetic character(s) or group of one or more alphabetic characters indicates a response is required when describing items with an approved item name or names represented by the key(s). An asterisk (\*) used in conjunction with any applicability key indicates that the characteristic stated in the requirement may not be applicable to all items covered by the FIIG.

#### (2) Master Requirement Codes (MRC):

A four-position code which is assigned to a FIIG requirement for identification of the requirement, cross-referencing requirements in the various sections and appendices of the FIIG, and for mechanized processing and retrieval of FIIG generated data. Absence of a MRC for a requirement indicates a lead-in to requirements with individual MRCs in Appendix B.

(a) The coding technique for providing MULTIPLE/OPTIONAL responses will not be used for a Section I requirement assigned Mode Code A or L that leads to Appendix B sketches with dimensional requirements.

#### (b) Identified Secondary Address Coding:

This technique is for extending the Master Requirement Code so that a unique address is provided for each application of the requirement in relation to the item and is authorized only as instructed within the requirement. Responses coded through this technique will always consist of the following: (1) Master Requirement Codes, (2) indicator code (a single numeric character determined by the number of positions contained), (3) identified secondary address code (1 to 3-digit alphabetic codes determined by the number of predicted replies), (4) the mode code, (5) the reply code and/or clear text response, and (6) end with a record separator (\*). Steps (1) through (6) are repeated for each application of the requirement.

#### (c) AND/OR coding:

A technique for extending the Master Requirement Code to provide a distinctive address for multiple responses to the same requirement. Responses coded through this technique will always consist of (1) Master Requirement Code, (2) mode code, (3) the response or reply code (as instructed by the requirement), (4) a single dollar sign (\$) for an OR condition, or a double dollar sign (\$\$) for an AND condition, (5) the mode code, (6) the response or reply code

## GENERAL INFORMATION

(followed by conditions (4) through (6) for each of the multiple responses) and (7) end with a record separator (\*). NOTE: Apply this technique only when instructed by the requirement sample reply (e.g.).

### (3) Mode Code:

A one-position alphabetic code that specifies the manner in which a response will be prepared. Each requirement assigned a MRC is also assigned a mode code. Sample replies follow each FIIG requirement displaying the proper construction of a response for the assigned mode code. The response to a requirement will always be prepared in accordance with the assigned mode code and sample reply except in the following instances:

(a) Use of E Mode Code replies is not authorized. If a reply needed to describe an item is not listed in the applicable table, contact the FIIG Initiator.

(b) Mode Code K may not be used for any requirement unless instructed by the requirement instructions.

### (4) Requirement:

This portion includes the characteristics data elements and data use identifiers required to identify and differentiate one item of supply from another, narrative definitions, and explanations as to use and method of expression. Instructions for coding and preparing replies are also provided.

### (5) Reply Code:

A code that represents an established authorized reply to a requirement.

#### d. Section III - Supplementary Technical and Supply Management Data:

This section includes those characteristics requirements necessary to support specific logistics functions other than National Stock Number assignment.

#### e. Appendix A - Reply Tables:

Tables of authorized replies to requirements and reply codes when the tables are too lengthy for inclusion in Section I/III, when applicable.

#### f. Appendix B - Reference Drawings:

This appendix contains representative illustrations which portray specific variations of one or more generic characteristics. If reference drawings contain requirements pages to be used in conjunction with illustrations for dimensioning purposes, the requirements pages will contain Master Requirement Codes, mode codes, and a statement of the requirement. A response to requirements on a requirements page is necessary only for those Master Requirement Codes applicable to the illustration selected.

#### g. Appendix C - Technical Data Tables:

## GENERAL INFORMATION

This appendix contains conversion charts and similar data pertinent to the requirements in Section I/III, when applicable.

3. Enter administrative MRC CLQL immediately following the last FIIG requirement reply, as instructed below:

| <u>MRC</u> | <u>Mode</u><br><u>Code</u> | <u>Requirement</u>  | <u>Example</u>          |
|------------|----------------------------|---|-------------------------|
| CLQL       | G                          | COLLOQUIAL NAME (common usage name by which an item is known) | CLQLGW OVEN WIRE CLOTH* |

### 4. Special Instructions and Indicator Definitions

#### a. Measurements:

Unless otherwise indicated within a requirement example, enter all measurements in decimal form, carried to the nearest three decimal places, with a minimum of one digit preceding the decimal. For SI (metric), enter all measurements with a minimum of one digit before and after the decimal. For fraction to decimal conversion, see Appendix C.

#### b. Indicators:

A cross hatch (#) following an AIN, MRC, Reply Code or Drawing Number indicates for "ALL EXCEPT USA" use only.

### 5. Indexes

#### a. Index of Data Requirements

This index is arranged in alphabetic sequence by Master Requirement Code, cross-referenced to the applicable data requirement and page number(s).

#### b. Index of Approved Item Names

This index is arranged in alphabetic sequence referenced to Applicability Key.

#### c. Applicability Key Index

This index is arranged in Applicability Key Sequence.

### 6. Maintenance

Requests for revisions and other changes will be directed to:

INDEX OF APPROVED ITEM NAMES COVERED BY THIS FIIG

## INDEX OF APPROVED ITEM NAMES COVERED BY THIS FIIG

| <u>Approved Item Name</u>  | <u>INC</u> | <u>App Key</u> |
|--|------------|----------------|
| <b>Adapter</b>   |            |                |
| 1. (Mechanical) Any modifying part, piece, or device, designed to facilitate connection, provide accommodation, enable application, and to broaden or permit the use of a given item with an unlike item of mechanical equipment when the two items are not designed for direct mating to each other.                                  |            |                |
| ADAPTER (1), SPARK PLUG  | 17309      | LA             |
| BASE, VOLTAGE REGULATOR  | 16561      | KA             |
| <b>Cap</b>   |            |                |
| 1. (Mechanical) A protecting and/or closing part, basically circular, designed with an integral means of securing itself and must partially inclose some protruding, external portion of the item to which it is attached. Excludes Cover (1).   |            |                |
| CAP (1), IGNITION DISTRIBUTION   | 13700      | AA             |
| A cap, generally of phenolic composition, designed to facilitate the connection to the high tension coil and spark plug leads to the distributor or magneto of an internal combustion engine.  |            |                |
| COIL, IGNITION   | 00303      | DA             |
| An item specifically designed to produce the high voltage necessary to provide a spark for igniting combustible mixtures, primarily in internal combustion engines.  |            |                |
| COIL, MAGNETO  | 18718      | EA             |
| An item consisting of two individual windings, one upon the other, inductively coupled, having a common iron core, specifically designed to convert the induced primary voltage to high secondary voltage required to ignite combustible mixtures, primary in internal combustion engines; is a maintenance item for a magneto.        |            |                |
| CUTOUT RELAY, ENGINE GENERATOR   | 17181      | JA             |
| A device for automatically opening the circuit between an engine generator and the battery of the engine electrical system to prevent the flow of reverse current to the generator and automatically closing the circuit when the voltage of the generator reaches normal range. Excludes REGULATOR, CURRENT; and RELAY (as modified). |            |                |
| DISK, VOLTAGE REGULATOR  | 00231      | KB             |
| A maintenance part of a carbon pile voltage regulator, usually having a specific ohmic value.  |            |                |

FIIG T130  
GENERAL INFORMATION  
INDEX OF APPROVED ITEM NAMES COVERED BY THIS FIIG

| <u>Approved Item Name</u>       | <u>INC</u> | <u>App Key</u> |
|---------------------------------|------------|----------------|
| IGNITER, SPARK, AIRCRAFT HEATER | 29199      | MA             |

An item having one or more electrodes arranged to form an air gap across which an electric spark is introduced and discharged to ignite fuel and air mixtures in an aircraft heater. In heaters designed for the single electrode type, two plugs or one plug and one electrode are required within the combustion chamber in proper placement to effect the air gap. An igniter plug with two or more electrodes differs from a spark plug by always having cooling facilities in the form of holes or slots in the plug casing to allow entry of air currents around the electrodes. Excludes SPARK PLUG; GLOW PLUG; and ELECTRODE.

|                      |       |    |
|----------------------|-------|----|
| IGNITER, SPARK, FUEL | 33715 | MA |
|----------------------|-------|----|

An item having one or more electrodes arranged to form an air gap across which an electric spark is introduced and discharged to ignite fuel and air mixtures in space heaters, furnaces, and the like. Excludes SPARK PLUG; GLOW PLUG; and ELECTRODE.

|                                    |       |    |
|------------------------------------|-------|----|
| IGNITER, SPARK, GAS TURBINE ENGINE | 19767 | MA |
|------------------------------------|-------|----|

An item having one or more electrodes arranged to form an air gap across which an electric spark is introduced and discharged to ignite fuel and air mixture in an internal combustion engine for the purpose of initial starting only. In engines designed for the single electrode type, two plugs are required within the combustion chamber in proper placement to effect the air gap. An igniter plug differs from a spark plug by always having cooling facilities in the form of holes or slots in the plug casing to allow entry of air currents around the electrode(s). Excludes SPARK PLUG; GLOW PLUG; and ELECTRODE.

|   |       |    |
|---|-------|----|
| RELAY-SOLENOID, ENGINE STARTER,<br>ELECTRICAL | 17084 | HA |
|---|-------|----|

An item having a moving plunger type core which travels parallel to the longitudinal axis of the coil(s), and which is primarily designed to perform the dual function of closing the circuit of a STARTER, ENGINE, ELECTRICAL and actuating the starter engaging mechanism. It must have provisions for attaching the mechanical linkage for actuating the engaging mechanism if the linkage is not included. May have provisions for manual actuation. Without contacts this item is known as a SOLENOID, ELECTRICAL. Without provisions for attaching mechanical linkage this item is known as a RELAY, ELECTROMAGNETIC. See also SWITCH, ENGINE STARTER, ELECTRICAL.

#### Rotor

1. (Electrical Rotating Machine) The rotating part of an electrical rotating machine which does not include a commutator. It may include a winding and/or collector rings.

|                             |       |    |
|-----------------------------|-------|----|
| ROTOR, IGNITION DISTRIBUTOR | 00246 | BA |
|-----------------------------|-------|----|

The rotating part of an ignition distributor which transfers electrical energy to stationary electrodes. Does not include shaft.

|                    |       |    |
|--------------------|-------|----|
| ROTOR (1), MAGNETO | 18720 | CA |
|--------------------|-------|----|

FIIG T130

| <u>Approved Item Name</u> | <u>INC</u> | <u>App Key</u> |
|---------------------------|------------|----------------|
| SLEEVE, IGNITION TERMINAL | 19963      | PA             |

An item consisting of an electrically insulated body, tubular in shape with provisions for insertion of wire. One end contains a spring to facilitate electrical contact and provisions for attaching a conductor. See also SUPPRESSOR, IGNITION INTERFERENCE. Excludes CLIP, ELECTRICAL; TERMINAL, LUG; and CABLE NIPPLE, ELECTRICAL.

#### Stator

1. The portion of an electrical rotating machine which contains the stationary parts of the magnetic circuit with their associated windings, or permanent magnets. It may include housing or frame.

|                              |       |    |
|------------------------------|-------|----|
| STATOR (1), ENGINE GENERATOR | 19968 | FA |
|------------------------------|-------|----|

A stator which is a maintenance part of a GENERATOR, ENGINE ACCESSORY.

|                            |       |    |
|----------------------------|-------|----|
| STATOR (1), ENGINE STARTER | 18719 | FB |
|----------------------------|-------|----|

|  |       |    |
|--|-------|----|
| STATOR (1), STARTER-GENERATOR,<br>ENGINE | 19969 | FA |
|--|-------|----|

A stator which is a maintenance part of a STARTER-GENERATOR, ENGINE.

|                                   |       |    |
|-----------------------------------|-------|----|
| SUPPRESSOR, IGNITION INTERFERENCE | 17170 | NA |
|-----------------------------------|-------|----|

An insulated cylindrical body, either straight or angular, containing a fixed resistance element, and usually with quick-disconnect type terminals, specifically constructed so that when connected in a high tension electrical ignition system it will reduce interference resulting from arcing of spark plugs, and similar devices. Excludes RESISTOR (as modified) and SUPPRESSOR, PARASITIC. See also FILTER, RADIO FREQUENCY INTERFERENCE.

#### Switch

1. A device which completes, interrupts or changes the connections in one or more electrical circuits by electrical, electronic, manual or mechanical actuation or as a result of changes in ambient temperature. It includes items consisting of individually separable switches which are physically interlocked (e.g., one button returns when the other is pushed), which have a common actuator, or are electrically connected. Excludes items which perform the same function by self-produced thermal action, such as relays, circuit breakers, fuses, or motor starters.

|   |       |    |
|---|-------|----|
| SWITCH (1), ENGINE STARTER,<br>ELECTRICAL | 17975 | GA |
|---|-------|----|

A manually operated item specifically designed to close the circuit of a STARTER, ENGINE, ELECTRICAL or the control circuit of its attendant solenoid. It must include a vacuum lock-out mechanism or utilize a switch contact independently mounted on the starter. For switches with integral contacts and no vacuum lock-out, see SWITCH (as modified). See also RELAY-SOLENOID, ENGINE STARTER, ELECTRICAL; and STARTER, MOTOR.

| 46         | 0.00157                    | 2.4649                     |

Unless otherwise stated in FIIG requirements, stranded conductors with circular mil areas below mid-points of AWG sizes are to be considered as having the smaller AWG sizes. Stranded conductors with circular mil areas at mid-points and above are to be considered as having the larger AWG sizes.

A stranded conductor with a circular mil area of 1836 would fall midway between 17 AWG and 18 AWG. For purposes of FIIG requirements, the conductor shall be described as being No. 17 AWG size.

For solid conductors or conductor strands of 0.010 inches in diameter or larger, the size will be expressed in the nearest AWG size if within one thousandth of an inch of being an exact AWG size. For solid wire smaller than 0.010 inches in diameter, the size should be expressed in the nearest AWG size if within one ten-thousandth (0.0001) of an inch of being an exact AWG size.

For purposes of FIIG requirements, a solid conductor or strand of wire 0.01596 inches in diameter shall be described as being No. 26 AWG size.
